COLLABORATOR INSTRUCTIONS FOR THE ADMINISTRATION OF THE CSES QUESTIONNAIRE:

(1) Following these collaborator instructions, this document is comprised of three sections:

))) CSES MODULE 5 QUESTIONNAIRE: ADMINISTRATIVE VARIABLES

The "Administrative Variables" section is a list of common administrative variables that, if possible, should be provided at the time data are deposited with the CSES Secretariat.
This is the CSES Module itself, a common module of survey questions for researchers to include in their national post-election survey. The CSES Module is intended to be administered exactly as it is specified in this document.

Collaborators are asked to provide data on background (demographic) characteristics of respondents, coded to an agreed upon set of standards as indicated in this section. There is great international variation in the ways that collaborators will go about soliciting information on the background characteristics of their respondents. The objective here is not standardization of the way collaborators ask these background questions, but instead, standardization to a common, cross-national scheme for coding each variable.

The CSES Module is intended to be administered in its entirety as a single, uninterrupted block of questions, unless noted otherwise for particular questions. In most cases, the CSES Module is included as part of a larger study. For reliable comparisons to be made, it is important that any additional items investigators may wish to include do not interrupt the CSES Module.
(3) The CSES module should be administered as a post-election interview.

(4) Where the CSES module is included in a larger study, to ensure that question-ordering effects are minimized, it is most preferable for the CSES Module to be administered at the beginning of the survey instrument. Where this is not possible, collaborators should be sensitive to the effects questions asked immediately prior to the module may have.

(5) NOTES often precede the question TEXT, and provide instructions for the administration of the item. Where no question TEXT is provided, collaborators should provide documentation of the question used.

(6) Showcards may be helpful for the administration of some questions. For this reason, a Respondent Booklet is available for download from the CSES website. The Respondent Booklet contains showcards for select questions. It is indicated in the NOTES when a showcard is available for a question.

(7) The response options that should be read to the respondent are contained in the body of the question TEXT.

(8) Where lower-case words appear in brackets [ ] collaborators should select the words that are most appropriate.
For example:

[party/presidential candidate]

...indicates that either the word "party" or the phrase "presidential candidate" should be read, but not both.

( 9) Where upper-case words appear in brackets [ ] collaborators should substitute the words that are most appropriate.

For example:

[COUNTRY]

...should be replaced with the name of the country where the election was held (perhaps "Canada" or "the Philippines").

Another example:

[NUMBER OF YEARS BETWEEN THE PREVIOUS AND THE PRESENT ELECTION OR CHANGE IN GOVERNMENT]

...should be replaced with a number that indicates the amount of years that have passed between the previous election and either the current election or recent change in government.

(10) Phrases that appear in parentheses ( ) contain words that are optional - that collaborators (or their interviewers) can decide to read or not read to respondents as needed.

(11) Words in question text that are in upper-case but NOT within brackets [ ] should be emphasized by the interviewer when reading
the question text.

For example, the word "COUNTRY" would be emphasized in the following question when the interviewer reads the question to the respondent:

What COUNTRY do you live in?

But in this next example, the interviewer does not emphasize the word "[COUNTRY]". Instead, this is an instruction for the collaborator to substitute the name of the respondent's country into the question text (for more information, see the eighth Collaborator Instruction above):

How long have you lived in [COUNTRY]?

(12) Interviewer instructions are available for some questions. These interviewer instructions, labeled as HELP, are intended to provide advice to the interviewers to assist in administering the question. It is also useful to discuss the interviewer instructions as part of interviewer training. The interviewer instructions, where available, appear after the question TEXT. In interviewer-administered surveys, interviewer instructions should be available to the interviewer, but not to the respondent. For example, in a computer-assisted interview, the interviewer instructions might appear on the screen in a special color, and
interviewers trained to make use of those instructions as necessary, but the interviewer should NOT read the interviewer instructions to the respondent.

(13) Some response options are followed by an arrow (->) and a skip pattern instruction. If the respondent selects that response option, the skip pattern instruction after the arrow is to be executed.

(14) Respondents who volunteer the response "DON'T KNOW" (or who have REFUSED to answer a question) should be coded as such. Interviewers should accept these responses and should NOT probe for additional information or force a respondent to use one of the response options provided in the text of the question.

(15) Special care should be taken in the administration of the Vote Choice items (Q12 and Q13 question series).

Wording for the Q12 and Q13 question series, which is to record vote choice in the elections, should follow national standards.

Collaborators are invited to compare their own national instrument with other instruments of countries that are part of the CSES and look for convergence where this is possible.

For Q13 (previous election), ask about the previous national
election of the same type (whether legislative or presidential).
For countries where more than one institution is being currently
elected on the same day (e.g. president and legislature), please
consider asking about the previous lower house election if votes
have been recorded for the current lower house election.

For Q12 (current election), for countries where more than one
institution is elected on the same day (e.g., president and
legislature) using different votes, please ensure that all votes
are supplied. Consider including all national elections having been
held within three months before or after the study's data
collection period.

Please ensure all vote choices are supplied as separate variables
in the dataset that you deposit.

For countries where voters have two votes for the same institution
(e.g. parallel and mixed member proportional systems; double
ballot systems), please ensure that both/all votes are supplied.

For countries using preferential systems (e.g., STV, AV) please
provide first and second preference vote.

(16) For questions asking about parties, collaborators should be advised
that they may add one or several party blocs to a list of
individual parties if they feel that it will be difficult for
respondents to recognize individual parties.

(17) Collaborators in the Comparative Study of Electoral Systems shall adhere to the following standards of data quality:

a. Mode of interviewing: Interviews should be conducted face-to-face, unless local circumstances dictate that telephone or mail surveys will produce higher quality data.

b. Timing of interviewing: We strongly recommend that collaborators in the Comparative Study of Electoral Systems conduct their interviews in the weeks following their national election. Out of concern for data quality, data collection should be completed in as timely a fashion as possible. In the event of a runoff election, interviewing shall be conducted after the first round election. The date of interview shall be provided for each respondent.

c. Placement of module in post-election questionnaire: The questionnaire module should be asked as a single, uninterrupted block of questions. We leave it to each collaborator to select an appropriate location for the module in their national survey instrument. Collaborators should take steps to ensure that questions asked immediately prior to the questionnaire module do not contaminate the initial questions in the module. Collaborators are also free to select an appropriate place in
their survey instrument to ask the turnout, vote choice, and demographic questions.

d. Population to be sampled: National samples should be drawn from all age-eligible citizens. When non-citizens (or other non-eligible respondents) are included in the sample, a variable should be provided to permit the identification of those non-eligible respondents. When a collaborator samples from those persons who appear on voter registration lists, the collaborator should quantify the estimated degree of discrepancy between this population and the population of all age-eligible citizens.

e. Sampling procedures: We strongly encourage the use of random samples, with random sampling procedures used at all stages of the sampling process. Collaborators should provide detailed documentation of their sampling practices.

f. Sample Size: We strongly recommend that no fewer than 1,000 age-eligible respondents be interviewed.

g. Interviewer training: Collaborators should pre-test their survey instrument and should train interviewers in the administration of the questionnaire. The Planning Committee will provide each collaborator with documentation that clarifies the purposes and objectives of each item and with rules with respect to probing
"don't know" responses.

h. Field practices: Collaborators should make every effort to ensure a high response rate. Investigators should be diligent in their effort to reach respondents not interviewed on the initial contact with the household and should be diligent in their effort to convert respondents who initially refuse to participate in the study. Data on the number of contact attempts, the number of contacts with sample persons, and special persuasion or conversion efforts undertaken should be coded for each respondent.

i. Strategies for translation (and back-translation): Each collaborator should translate the questionnaire module into their native language(s). To ensure the equivalence of the translation, collaborators shall perform an independent re-translation of the questionnaire back into English. Collaborators engaged in translation of the questionnaire module into the same language (e.g., Spanish, French, English, German, and Portuguese) should collaborate on the translation.

DID RESPONDENT CAST CANDIDATE PREFERENCE VOTE

------------------------------------------------------------

NOTES: If an open-list electoral system was used for the legislative election in question and respondent cast a ballot.

This item should report whether or not the respondent cast a preference vote for a candidate.

For instance, if votes are cast for party lists, but citizens can, in addition to that, mark a preference for one or more candidates on the party list, then Q12LH-d may show answers to a question like this: "Did you simply vote for a party or did you also express a candidate preference?" In party list systems where voters have to vote directly for a candidate and cannot cast a vote just for the party list as such (e.g. Estonia, Finland, the Netherlands, Poland), this question should read like this: "Do you consider the vote that you cast merely a vote for the party, or did you also mean it as a vote for a particular candidate?"

NOTES: In most national contexts, the left-right dimension will be the single best ideological summary of the current issue conflicts in a society. Where this is known not to be the case, a more pertinent dimension of ideological conflict (like the independence-integration dimension in Taiwan) might be used in addition to the left-right placement scales.

So where left-right is not considered meaningful/important/widely understood, IN ADDITION TO ASKING THE LEFT-RIGHT QUESTION, the collaborator has the option of also administering a second scale (of 11 points: 0-10) which is thought to best summarize the main ideological division in the country.

D17. >>> REGION OF RESIDENCE
---------------------------------------------------------------------------

NOTES: This variable reports the respondent’s region of residence using coding categories not more detailed than the autonomous regions in Spain, or the Laender in Germany. Regions are usually (but not always) based upon the social, cultural, or historical differences (though some correspond to administrative regions) that manifest themselves in political cleavages.

.................................................................
D18. PRIMARY ELECTORAL DISTRICT

NOTES: This item should indicate the respondent's primary electoral district.

Wherever possible, this variable should use official district identification numbers.

The goal of this variable, wherever possible, is to identify electoral constituencies, the definition of which is "the smallest unit for which there is representation to the national parliament." In other words, the point at which votes are translated into seats.

00001-90000. [PLEASE PROVIDE DISTRICT CODE VALUE LABELS]

D19. >>> RURAL OR URBAN RESIDENCE

---------------------------------------------------------------------------

NOTES: This item should distinguish respondents living in rural and urban regions.

Please provide the criteria used to distinguish these different regions.
